

# AUTISM-SPECIFIC ASSESSMENT CLINIC

The AEIOU Assessment Clinic provides affordable, autism-specific standardised clinical assessments for children across Queensland aged 3 to 8 years.

Our assessments support families and educators to understand a child's unique strengths, needs, and preferences related to autism; and support health professionals like paediatricians in determining a diagnosis of autism.

## Our expert team

Our team of qualified Assessors hold psychology (honours) degrees, clinical assessment training, ADOS-2 accreditation, and experience working with and supporting young children with autism.

## Clinic location

The Assessment Clinic is located in Spring Hill, Queensland.

Outside of Greater Brisbane, we may be able to arrange assessments within an AEIOU centre near you.

## Cost of assessment

All assessments are privately funded at this stage. AEIOU assessments are not eligible for Medicare or private health rebates, or NDIS funding. See other page for cost/prices.

## Which assessment package is best for my child?

Each child's journey and development is unique, therefore, we are happy to discuss our assessment packages in further detail to help you decide which package best suits your needs. See the next page for more details about different packages we offer.

## A note about diagnosis

Our clinic does not provide diagnosis of autism, or diagnostic decisions. In line with best-practice guidelines, we recommend that a health practitioner reviews the Assessment Report to determine diagnosis.

We are here to help create smoother and faster processes for autism assessment, diagnosis, and access to intervention.

# WHICH ASSESSMENTS DO WE OFFER?

## Full Autism Assessment

### Location

AEIOU  
Assessment Clinic

### What:

Our Full Autism Assessment provides a detailed evaluation of autism symptoms and behaviours across areas of development often affected by autism, and observed within different environments (i.e., home and kindergarten/school).

### Assessment Package Includes

An overview of developmental history and concerns, as well as assessment and detailed clinical reports of:

- Language and communication
- Daily living skills and adaptive behaviours
- Socialisation skills and difficulties
- Sensory processing and aversions
- Early learning skills (children under age 69 months)
- Repetitive/restricted behaviours associated with autism
- ADOS-2 – Autism Diagnostic Observation Schedule (Clinical observations of autism behaviours)

*Note. We do not provide cognitive or intelligence testing (i.e., WISC, WPPSI).*

**Who:** Children aged 3 – 8 years

**Cost:** \$1,300 (3-5 years) or \$1,100 (5-8 years)

## ADOS-2 Assessment

### Location

AEIOU  
Assessment Clinic

### What:

The Autism Diagnostic Observation Schedule (ADOS-2) is a semi-structured clinical assessment that identifies characteristics and behaviours related to autism in children through observation and structured activities.

This assessment package typically includes:

- ADOS-2 Assessment
- A clinical report with a full, in-depth overview of assessment observations, responses and ADOS-2 scores
- Report of brief developmental history and current challenges/concerns

**Who:** Children aged 3 – 8 years

**Cost:** \$600

## Tailored Assessments

### Location

Various

### What:

A tailored assessment package provides a focused clinical report, with information related to specific areas of your child's development or autism characteristics.

Please speak to one of our Clinical Assessors to identify how we can best tailor an assessment to suit your child's needs. Costs vary.

**Cost:** Dependent on assessment selection.

*In line with best-practice guidelines, AEIOU adopts a multi-disciplinary approach to assessment outcomes. Our assessments are not conducted by registered psychologists, therefore reports require review by qualified professionals for interpretation and clinical outcomes.*
